Education

University of Toronto
Honours B.Sc., Double Major in Computer Science & Statistics
• GPA: 4.0/4.0; 2025, 2026 Dean's List Scholar; coursework in systems, databases, machine learning, statistics, regression modeling, and user research/prototyping.

Sept. 2024 – Present
Toronto, ON

Experience

Research Developer, Generative AI Mastery Learning Platform
University of Toronto
• Contribute to an LLM-powered educational platform supporting mastery-based mathematics instruction.
• Develop prompt-guided workflows, API-connected features, and student-facing learning tools with faculty and developers.
• Test AI-assisted learning workflows iteratively to improve usability, instructional feedback, and student interaction design.

Apr. 2026 – Present
Toronto, ON

Student Software Engineer, Office Hour Management System
University of Toronto
• Develop a web-based office hour system with a CS professor and student team for real teaching environments.
• Designed PostgreSQL schemas and backend workflows for scheduling, staff management, student check-in, and session tracking.
• Test and maintain application workflows through in-person deployment checks with developers and teaching staff.

Apr. 2026 – Present
Mississauga, ON

Research Assistant, Economics Research on Innovation and Firm Dynamics
University of Toronto
• Develop Python workflows for large-scale web scraping, license data extraction, and structured text processing.
• Evaluate LLM-assisted extraction pipelines using manually labelled samples and prompt/parameter tuning.
• Deploy local LLM and data-processing workflows on Digital Research Alliance of Canada compute servers.

Apr. 2026 – Present
Toronto, ON / Remote

Teaching Assistant, Department of Mathematical & Computational Sciences
University of Toronto Mississauga
• Support statistics tutorials, office hours, assessment grading, and individualized feedback on student misconceptions.

Jan. 2026 – Present
Mississauga, ON

Projects

Artwork Classification | *Python, scikit-learn, Pandas, NumPy, SciPy, Matplotlib*
• Built a machine learning pipeline for mixed numeric, categorical, and open-text survey data.
• Engineered text features and evaluated logistic regression models using cross-validation.

Winter 2026

TMAP — Indoor Navigation Decision-Support Prototype | *User research, usability testing*
• Synthesized interviews, personas, and usability findings for a student-facing indoor navigation prototype.
• Conducted think-aloud evaluations and contributed iterative design improvements based on user feedback.

Winter 2026

Skills

Languages: Python, JavaScript, Java, C, C++, SQL, R, HTML
Data / AI: Pandas, NumPy, SciPy, scikit-learn, Matplotlib, LLM-assisted extraction, prompt/parameter tuning, local LLM deployment, labelled evaluation samples
Education Research / UX: Educational technology, AI tutoring workflows, usability testing, user research, student-facing tools, technical communication
Backend / Systems: REST APIs, Flask, Git, JSON, PyTest, Hypothesis, PostgreSQL, database design, Linux/Unix, Digital Research Alliance compute servers
